Internet Communications

Business-grade, reliable internet

The internet is like oxygen for your business. Without it, even for a short amount of time, the impact on your business and its productivity can be significant. With over 1 billion internet users, finding a fast, high availability, business-grade internet service can be a challenge. Not anymore.

Robust, reliable and fast internet communications
Hosts Unlimited's internet communications service interconnects with multiple tier 1 business providers including BT, Virgin, Vodafone and Talk Talk, meaning that we can deliver a highly resilient service which guarantees the fastest connection available at any time.

What's more, the solution can be built to ensure that there is no single point of failure, meaning if any of the individual routes should go down, your business still stays connected at all times.

Tailored to suit your business needs

With speeds from 2Mb through to 10Gb and access via a range of methods including fibre connectivity, EFM and FTTC, Hosts Unlimited can guarantee that you receive a service to suit your needs without compromising on quality or price.

Future-proof

If your requirements change in the future there's no need to worry. We can adapt your solution as your needs change and with Hosts Unlimited's consultative approach you can rest assured that we'll be with you every step of the way.

When it comes to providing internet communications, our experience and knowledge is second to none.

Talk to one of our experts today about how you can benefit from business-grade, reliable internet communications from Hosts Unlimited.

Internet Options

Fibre leased lines
When an internet connection is nothing short of mission critical, we recommend fibre leased lines. With this service you can benefit from speeds ranging from 10Mbps to 1Gbps courtesy of a fibre connection using Ethernet technology that's delivered right to your door.

Fibre leased lines deliver unrivalled quality as there is no copper involved. There is also more opportunity to increase bandwidth over time without the need for major infrastructure changes.

EFM
EFM or Ethernet in the First mile is a high quality alternative to traditional leased lines. It is also a scalable service offering speeds between 2Mbps and 20Mbps with dedicated connectivity.

Although this is an Ethernet technology, the service uses copper tails instead of fibre leased lines so delivery lead times are shorter than dedicated fibre. The service also has in-built resilience as each connection operates over multiple copper lines that are bonded together.

Ethernet over FTTC
Enjoy symmetrical bandwidth at up to 20Mbps for a fraction of the cost you would pay for a legacy leased line service. This service operates over a Fibre to the Cabinet (FTTC) tail between your offices and the exchange which is then backhauled over a national Ethernet Service.
